No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             B B

GENERAL INFORMATION:

APPLICANT: Homburger et al.

TITLE OF INVENTION: Nucleic acids and proteins of Drosophila melanogaster FILE REFERENCE: File Reference: 7326-094

CURRENT APPLICATION NUMBER: US/09/270,767

CURRENT FILING DATE: 1999-03-17

NUMBER OF SEQ ID NOS: 62517

SOFTWARE: Patentin Ver. 2.0

SEQ ID NO 16903

LENGTH: 754

TYPE: DNA

ORGANISM: Drosophila melanogaster

/note="Zip; Region: ZIP Zinc transporter. The ZIP family consists of zinc transport proteins and many putative metal transporters. The main contribution to this family is from the Arabidopsis thaliana ZIP protein family these proteins are responsible for zinc uptake in the plant. Also found within this family are C. elegans proteins of unknown function which are annotated as being similar to human growth arrest inducible gene product, although this protein in not found within this family"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       /tissue_type="Olfactory epithelium, C57B1/6"

```
The invention relates to a novel isolated polypeptide (NoVX) comprising a comparising a comparising and the form of any of the 37 amino acid sequences fully defined in the genetication. A polypeptide of the invention has antidabetic, cardiant, hypotensive, antiarteriosclerotic, ancrectic, cardiantic, and antiarteriosclerotic, cardiovascular diseases (hypertension, anterosclerosis), neurodegenerative disorders, lazheimer's chieferteriosion, anterosclerosis), neurodegenerative disorders, lazheimer's chieferteriosion, anterosclerosis, inclammatory skin disorders, costomatory skin disorders, antiarteriosclerosis, haematopoietic disorders, inflammatory skin disorders, costomatoriosclerosclerosclerosis, incurative disorders, lazheimer's chieferteriosclerosclerosis, haematopoietic, antiarterioscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleros
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    10-SEP-2002; 2002US-0409544P.
